Experienced: Java, C++, Ruby on rails, MongoDB

PROJECTS

The Almost perfect pick

- Work in a team of four members and developed this app in short period of two weeks to assist users of Netflix to narrow down a good movie based on IMDB Rating of 6 or higher. Our motto: More movie time and less browse time.
- Technologies Used: HTML, CSS, Bootstrap, JavaScript, jQuery, AJAX and Firebase, the Movie DB API, Unofficial Netflix Online Global Search API, Libraries Used: FirebaseUi-Web (for user authentication)
- https://github.com/ahang/project_ares

Whistle

- The app lets you to press an alert button when you are in an emergency and alert your friends through email your current location. The app also has the timer feature which requires you enter the amount of time your journey will take. In case you don't get home from an outdoor trip or other event by your scheduled return time, the app will automatically send an email to your emergency contacts (it can be your friends or a family member).
- This app uses HTML5/CSS3, JavaScript, JQuery, Bootstrap, Google Map API, node, RESTful Routes, Express, Body-Parser, MySQL and ORM.
